

2-day training

HANDLING BIG TREES

Big trees add value

New urban development's often require the planting of big trees. We specialize in these (semi-)mature trees and deliver these throughout Europe. We lift the trees with special machinery and take care of good loading to make sure the trees will arrive in best possible condition at the plot. Usually, at that point our job is done, but we consider it essential that the trees will be unloaded and planted in a correct way at their final location. Only by correct handling, the trees will show a good regrowth and will add substantial value to the project. To support our customers in achieving the best possible result we organise two-day trainings to share our knowledge.

Training 'Handling big trees'

The two-day training contains the following elements:

- Tying trees
- The lifting of trees
- Loading in the field
- Loading in the warehouse
- Planting
- Anchoring
- Aftercare
- Pruning

The trees we will work with during the two days will have size 30 to 70 stem circumference, approx.

Additional options are a course about the assortment in trees, a tour in the nursery, explanation of the cocos rootball and airpot system. Ask us for more info.

Practical info

The training will be given by our production manager and his foremen at the nursery. A group will contain of maximum 10 persons.

The costs are **€ 495,- per person**, including:

- 2 lunches
- 1 diner
- 1 night in a hotel in the area
- transfer to the hotel
- guidance by one of our staff members

Location:

Van den Berk Nurseries
Donderdonk 4
5492VJ Sint-Oedenrode, The Netherlands
